PROFESSIONAL SUMMARY

Java Backend Developer with 6+ years building scalable backend systems, REST APIs, and event-driven microservices using Java, Spring Boot, and AWS. Hands-on experience with **MuleSoft integration** and Salesforce APIs through certification projects. **AWS Certified Developer**, **Salesforce Certified MuleSoft Developer**, and **Salesforce Certified Administrator**. Full stack capable with React.

TECHNICAL SKILLS

- **Core Backend:** Java, Spring Boot, Hibernate, JPA, REST APIs, Microservices, Multithreading, Concurrency
- **Integration:** MuleSoft, DataWeave, API-led Connectivity, Salesforce Connector, JSON, XML, OAuth 2.0
- **Build, CI/CD & Testing:** Git, Maven, Gradle, Jenkins, JUnit, Elasticsearch, Kibana
- **Frontend:** React, JavaScript, HTML, CSS
- **AWS & Cloud:** Lambda, EventBridge, SQS, SNS, SES, S3, RDS, CloudWatch, IAM, API Gateway
- **Databases:** SQL, PostgreSQL, MySQL, Oracle, SQL Server, MongoDB, Snowflake
- **Architecture Patterns:** Event-Driven, Async Processing, Idempotency, Distributed Workflows

CERTIFICATIONS

- [AWS Certified Developer – Associate \(DVA-C02\) | 2026](#)
- [Salesforce Certified MuleSoft Developer | 2026](#)
- [Salesforce Certified Platform Administrator | 2026](#)

PROFESSIONAL EXPERIENCE

Software Engineer, 09/2023 - 05/2025

Infrablok – Noida, Uttar Pradesh, India (Remote)

- Built REST APIs and Java backend services on Spring Boot for **IQM**, an ad-tech platform processing high-volume creative and campaign data.
- Designed event-driven serverless components on AWS Lambda integrated with EventBridge, SQS, SNS, SES, and S3 to deliver resilient async workflows with idempotent retries and explicit state recovery.
- Optimized Snowflake and SQL queries to improve backend data processing throughput.

Software Engineer, 12/2022 - 05/2023

Edifecs – Mohali, India (Remote)

- Integrated Trino into the application stack to enable efficient querying of large Hadoop-based datasets for healthcare workflows.
- Developed reusable Java backend components for **Enrollment Management** and contributed to validation, configuration, and production-readiness testing.

Software Engineer, 08/2021 - 11/2022

Netsmartz – Chandigarh, India (Remote)

- Built Java-based backend services and REST APIs for **Tata Play Binge**, an OTT aggregation platform.
- Integrated with external streaming platforms including Apple TV+, Hoichoi, and Lionsgate Play using JSON and XML-based data exchange.

Software Engineer, 09/2018 - 07/2021

Dataguise, A PKWARE Company – Mohali, India (Hybrid)

- Developed backend features for PK Discovery, a sensitive data discovery and masking platform with compliance support for HIPAA, PCI-DSS, and PHI across Oracle, SQL Server, and PostgreSQL.
- Engineered multi-threaded Java backend for scanning semi-structured JSON and XML payloads with optimized resource allocation and thread-safety in concurrent data access paths.

SELECTED PROJECTS

Ad Creative Processing Pipeline | IQM Platform (Work Project)

- Designed an async creative upload pipeline on AWS Lambda, SQS, and S3, eliminating upload timeouts by offloading thumbnail generation and multi-resolution rendering to background workers.
- Engineered idempotent retry logic and an explicit state machine (uploaded → processing → partially failed → completed) to ensure consistency and prevent duplicate outputs under async retries.
- Applied event-driven workflow design across Lambda, SQS, and EventBridge to guarantee reliable end-to-end delivery under partial failure conditions.

Salesforce to MuleSoft ERP Account Sync | [GitHub](#)

- Designed and implemented a Salesforce-to-ERP sync pipeline using MuleSoft, orchestrating Salesforce data retrieval, DataWeave transformation, and ERP delivery with structured error handling and end-to-end traceability.
- Demonstrated API-led connectivity patterns, CRM-to-ERP payload mapping, and integration reliability practices using Anypoint Studio and Postman.

PK Discovery Backend | Dataguise, A PKWARE Company (Work Project)

- Engineered multi-threaded Java backend for sensitive data discovery and masking across Oracle, SQL Server, and PostgreSQL environments with compliance support for HIPAA, PCI-DSS, and PHI.
- Implemented semi-structured JSON and XML data processing with optimized resource allocation and thread-safety in concurrent data access paths.

EDUCATION

Master of Computer Applications (MCA): 2024

Indira Gandhi National Open University - India

Bachelor of Computer Applications (BCA): 2018

I.K. Gujral Punjab Technical University - India
